

Application Serial No. 10/731,814
Reply to Office Action of October 31, 2006

JAN 30 2007 PATENT
Docket: CU-3482

REMARKS

In the Office Action, dated October 31, 2007, the Examiner states that Claims 1-16 are pending, and Claims 1-16 are rejected. By the present Amendment, Applicant amends the specification, and the claims.

In the Office Action, the description at page 4, lines 25-26 is objected to for a minor informality. An appropriate correction has been made.

The preamble of Claim 1 has been amended to recite "a method of using a server computer for designing paint", instead of a method of designing paint for a server computer, to correct a translation error.

Claims 1 and 14 have been amended to provide antecedent basis for the limitation "the ingredient determined paint".

In the Office Action, Claims 1-16 are rejected under 35 U.S.C. §101 as being directed to non-statutory subject matter. Claims 1 and 14 have been amended to state that the determining ingredients step includes forming an ingredient-determined paint.

In the Office Action, Claims 1-6 and 8-15 are rejected under 35 U.S.C. §103(a) as being unpatentable over Snyder et al. (US 5,907,495). Claims 7 and 16 are rejected in further view of Stat-Ease Inc. The Applicant has incorporated the features of Claim 5 into the independent claims, and considers that this amendment overcomes the rejections.

Snyder describes "The paint is said to be characteristically understood with respect to certain physical properties and/or performance characteristics in application and field use generally associated with a production released or validated paint, which may include as non-exhaustive examples adhesion characteristics, resistance to sag, high humidity durability, chip resistance, and ultra-violet exposure durability. Paint validation as referred to herein means successful conformance testing of paint against predetermined criteria as well known in the art" (column 6, lines 39-48). The Applicant considers that this fails to disclose "wherein at least one of painting workability, coating film performance, and paint performance is predicted as the performance of the ingredient-determined paint." For at least this reason, the claims as amended are not obvious in view of Snyder.
